1 Phonology

Phonemes. /t/, /s/, /r/, /j/, /h/.

- /t/: is [t] when non-syllabic, [ɳ] when syllabic.
- /s/: is [s] when non-syllabic, [ʃ] when syllabic.
- /r/: is [r] when non-syllabic, [ɾ] when syllabic.
- /j/: is [j] when non-syllabic, [i] when syllabic.
- /h/: is [h] when non-syllabic, [h̥] when preceded by a tautosyllabic consonant, [a] when syllabic.

Syllabic structure. C, CC, CCC.

- C: the consonant is syllabic. /t/ = [ɳ], /s/ = [ʃ].
- CC: the second consonant is syllabic. /tt/ = [tɳ], /jh/ = [ja].
- CCC: the third consonant is syllabic, unless two consecutive identical Cs. /tjh/ = [tja], /rjt/ = [rjɳ]. When two consecutive identical Cs, the one that is second within the syllable is syllabic: /jtts/ = [itɳs], /trhh/ = [ɳrah].

Syllabification. Consonants are assigned to syllables according to the following algorithm:

1. Assign the first C to its own syllable.
2. From the right, assign as many three-consonantal syllables as possible, unless this would create a second mono-consonantal syllable (*C.C.CCC/ is not possible).
3. Assign the remaining consonants to two-consonantal syllables.

Example:

1. CCCCCC
2. (C)CCCCC
3. (C)CC(CCC)
4. (C)(CC)(CCC)

/tsjhhr/ = [ɳ.si.har]. /rrhtthj/ = [ɾ.r^hɳ.t^hi].

Roots are minimally disyllabic and maximally trisyllabic. Possible roots:

- C.CC
- C.CCC
- C.CC.CC
- C.CC.CCC
- C.CCC.CCC (rare)

/tthj/ [ɳ^hi] 'tree'. /tthjh/ [ɳtaja] 'trees'.
